Abstract

This paper analyzes automated claim processing systems deployed across regional hospitals in India. The dataset used in this study included sensitive records such as patient identifiers, insurance policy numbers, and internal transaction references.

Section 1 — Case Description

Case No: HC-2023-77821
Docket: CIV/22A-9981

The subject patient, Ramesh Kulkarni, residing at 42 Palm Street, Pune, Maharashtra, filed a claim under Policy Number POL-992187-A.

The hospital billing department recorded the following internal identifiers:

Transaction ID: TXN-882910239
Reference ID: REF-77812-B
Bank Account: 912345678901
Credit Card: 4111 1111 1111 1111

Section 2 — Student Intern Audit

During a parallel academic audit, student researcher Priya Sharma (Student ID: STU-44821) reviewed anonymization techniques used by the system.

Roll No: CS2022-771
Registration Number: REG-92811

The intern was paid a salary of ₹45,000 for three months of work.

Section 3 — Medical Compliance

The audit was approved by Medical License ID: MED-998211.

Patient Date: 12/05/2023
